Specialization: Health and Safety

About me

My goal is to gain experience in programming, develop organizational and future managerial skills.
I want to improve towards Front-end programming, learn from the best, broaden my horizons through courses, trainings, guides, but also by doing my own projects, under the watchful eye of experienced programmers.

My story began with the desire to create a website based on Wordpress. After starting it, I felt unsatisfied. I found that I wanted more interference in its appearance than just using someone else's templates. Independent programming, design and the entire web development process give me great joy and I would like to develop further.

Therefore, I am very interested in working permanently in a company with extensive programming experience.
